

WHAT IS CLAIMED IS

1. Material characterized by that the material contains at least one biologically active di- or trisaccharide or higher oligosaccharide which is covalently bound via a spacer to cross-linked agarose.

2. Material characterized by that the material contains at least one biologically active saccharide which is covalently bound via a spacer to a cross-linked matrix.

3. Material according to claim 2, which has been treated by autoclaving.

4. Material according to claim 2, completely or partially filled in an autoclavable column containing biocompatible material.

5. Column according to claim 4, which has been treated by autoclaving.

6. Use of any product mentioned in claim 2.

7. Use of any product mentioned in claim 3.

8. Use of any product mentioned in claim 4.

9. Use of any product mentioned in claim 5.
